

Erratum

MB 830241 is the correct Mycobank number for *Micarea sambuci*

P.P.G. VAN DEN BOOM

In the recently published paper: A new *Micarea* species from western Europe, belonging in the *Micarea denigrata* group (VAN DEN BOOM et al. 2018), on page 386, the authors described a new species as *Micarea sambuci* van den Boom, Brand, Coppins & Sérus. MB # 811051.

Unfortunately, they have used the same identifier again for the publication of *M. sambuci*. The latter name has to be regarded as invalid now due to Art. F.5.1 (Shenzhen). The Mycobank number 811051 is already in use for *Micarea herbarum* M.Brand, Coppins, Sérus. & van den Boom (VAN DEN BOOM et al. 2017). *Micarea sambuci* is validated here:

Micarea sambuci van den Boom, M.Brand, Coppins & Sérus., sp. nov. MB 830241

Syn.: *Micarea sambuci* van den Boom, M.Brand, Coppins & Sérus., Herzogia 31(1/2): 386 (2018), MB 830238, nom. inval. (Art. F.5.1 Shenzhen).

Type: The Netherlands, Noord-Brabant, E of Best, Nieuwe Heide, W of Joe Man theatre, open grassy place in *Pinus* forest, with *Quercus robur*, 51°30.7' N, 5°26.0' E, on trunk of *Quercus*, 9 December 2000, P. & B. van den Boom 25550 [holotype in L; isotype in herbarium v.d. Boom].

Description: A detailed description is given in VAN DEN BOOM et al. (2018: 386).

Acknowledgement

The Mycobank team is gratefully acknowledged for pointing out the error.
